ymodem to transfer to machz

simple minded protocol 64 bytes at a time.

at host end machz term drives com port. 9600 baud - commands it to 57600

we reset the configu on win32 machine to be 576. 75% hit ratio

set communicaiton line parameters

send DLS, if we don't see the response

loadbios application

machz term

two versions, one for ATMEL and one for INTEL

procedures stubbed out

consultation services. NineAcres

there are a whole bunch of registers in CFI which tell you how to tailor your flash programmer to it. The intel flash will come with the application -- he said that he would be very surprised if our version worked. WE believe at this point we are getting data into the flash. The guy that worked on the Intel flash burner is off working on that.

hit the reset button - LEDs light up at 0 and stay there. 1/4 it will

Kevin said we are getting a funny ground on the target.

Visual C++ + Borland 4.5 TASM EXETOBIN. C
