

Dimensions for SO-Dimm

Tri-M Engineering supplies this PCB layout as a courtesy to the industry, encourages all uses to verify the design in their application, and accepts no responsibility for errors or omissions.

This is one example of how an SDRAM 144 pin SO-DIMM connector can be used with the ZF Linux Devices MachZ processor. The SDRAM follows the Jedec defined pinout of the 144 pin SDRAM SO-DIMM connector, however the design is not Jedec compatible.
